

# Tabicat Frameless sturdy, stylish & modern

Tabicat

Designed for longevity and beauty, a custom-designed frameless shower screen by Tabicat combines quality and style to create a shower screen that is sure to enhance your bathroom with an optimal fit.

# Quality Frameless Solutions

## Style with Substance

A quality frameless shower screen is a stunning enhancement to your bathroom. However, not all frameless screens are alike; cheap, imported glass, inferior hardware and untidy seals can ruin the clean and modern look a frameless screen is meant to provide. Tabicat frameless screens are carefully custom-measured and fitted, and made using only the finest materials.

These solid brass hinges are rated at 50,000+ cycles, unlike cheaper hinges which are only covered for 5,000. Available in chrome, satin, brushed nickel, copper, bronze, white and gold.

The robust design of the solid brass hinges used in Tabicat showers, compared to a cheap, skeletonized pressed metal hinge, which was removed from an existing brand new shower due to complete failure.

## Our Frameless Screens:

- ◆ Are installed with the utmost care, including properly plugged and drilled holes, minimal and even gaps, and extra-tidy seals and pre-seals.
- ◆ Use the finest quality solid brass hinges with stainless steel springs, available in many attractive finishes.
- ◆ Are made from locally manufactured toughened glass which meets Australian standards.

Detail of solid brass shower-to-wall bracing.

Glass-to-ceiling support solid brass support bars are also available as an attractive option for panels.

- ◆ Can be designed using additional options such as bracing and/or support bars, polycarbonate strike for water deflection, and 180° hinge systems.
- ◆ Use custom D-mold threshold to hide waterproofing lines and give your shower screen a clean, consistent seal.

Custom D-mold threshold with floor clamps.

## Available Styles

Tabicat specialize in 8-10mm frameless screens; however, shower screens with header systems are also available in 6mm glass. Screens can be designed for 180° front-only, 90° or 135° showers, bath showers, or even showers with irregular angles.

10mm frameless screen, designed to suit an existing irregular hob.

We also offer the Serenity frameless sliding system, as well as a hybrid bifold which utilizes the best of two systems to create a unique and extremely strong bifold folding shower door.
